“The Ergonomics Of A One-Piece Handheld Household Item”

Spatula Description:

~Shape And Physical form

The handle of the spatula is a cylinder which makes it

Easy to hold as the hand can wrap around it without difficulty.

The shape of the top of the spatula is a square or a rectangle,

Ensuring it is big enough to flip whatever item is on the pan but

If the top was to be too small, it would not be a functioning spatula

~Proportion

The spatula handle is small enough to hold and fits easily into

the hand as if it was too big and heavy It would be very difficult

to hold and therefore, wouldn't be very useful

~Colour And Materials

The spatula is all black

The material used in making this spatula is plastic

~Safety

The handle of the spatula is long ensuring that your far enough

Away from the pan that you won't burn your hand and that not as

Many splashes of oil from the pan would hit you also causing your
Hand to burn
